

Housing Assemblies Safety Valve Filter Housing

COMO's Safety Valve Filter Housings allow you to install a COMO bypass depth filter directly to a high pressure hydraulic system without exceeding the filter vessel pressure rating. Our safety valves will maintain a maximum 60 PSI within the housing while allowing constant flow for continuous contamination control.

THIS PRODUCT FILTERS

- Hydraulic fluid

SPECIFICATIONS

- One C-1000 chrome-plated depth-filter housing
- 0.5, 1.0, 1.5, 2.0, or 2.5 GPM flow
- Aluminum (3,000 PSI) or steel (5,000 PSI) safety valve block
- Minimum fluid pressure: 100 PSI
- Maximum fluid pressure: 3,000 PSI Aluminum; 5,000 PSI steel
- Optional sample port valve
- Dimensions: 12" W x 10" D x 33" H
- Approximate weight: 30lbs.

STANDARD FEATURES

- Pressure gauge to monitor filter element life
- Mounting brackets for bolting filter housing to machine
- Vent fitting to bleed air from filter housing

**Don't let particulate & water destroy your oil and reduce machine reliability.
Prevent pump and valve malfunction and maximize uptime with a COMO Filter.**
